Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6, 9-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Kay et al. 3854920.

Kay et al. teach an apparatus having a heated male and female mold that are made of the same ceramic material (col. 4, lines 52-58, 66-67, col. 5, lines 1-5, a refractory having high silica or high alumina content is a ceramic material). Kay et al. also teach the thermal expansion of the male and female members being the same (col. 4, lines 52-58, since the male and female molds (the dies) are made of the same material, their thermal expansion must, inherently, be the same). Kay et al. also teaches heating the the male and female molds to the same temperature (col. 12, claim 17, step (b)).

Kay et al. also teaches the method claims 9-14. Kay et al.'s teachings with respect to the method claims can be found in the same citations as noted above with regard to the apparatus.

Claims 7-8, 15-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Wampler et al. 5178660.

Wampler et al. teach press forming glass sheets using a female ceramic ring mold (col. 8, lines 12-38, the coating of "alumina" and the other enumerated ceramics

constitute a female ring mold "comprised" of ceramic). The term "comprising" is a broad term that may encompass a ring mold with any additional features. Thus, the claimed ring mold may only have a coating of ceramic material and still be deemed to be "comprised" of ceramic material.

Wampler also teaches that the ring mold has a heater installed therewith (Fig. 4).

Wampler also teaches the method comprising pressing glass between the male mold and the ring mold (Fig. 1, ref. no. 27, 28).
